

# Simple. Economical. Reliable.

## The new EES70 Waste Treatment Controller

The EES70 Waste Treatment Controller is an economical, generic, replacement controller for a number of domestic waste treatment plants. It provides all of the necessary functions for operation of the plant, plus additional functions to aid both the owner and operator/service person.

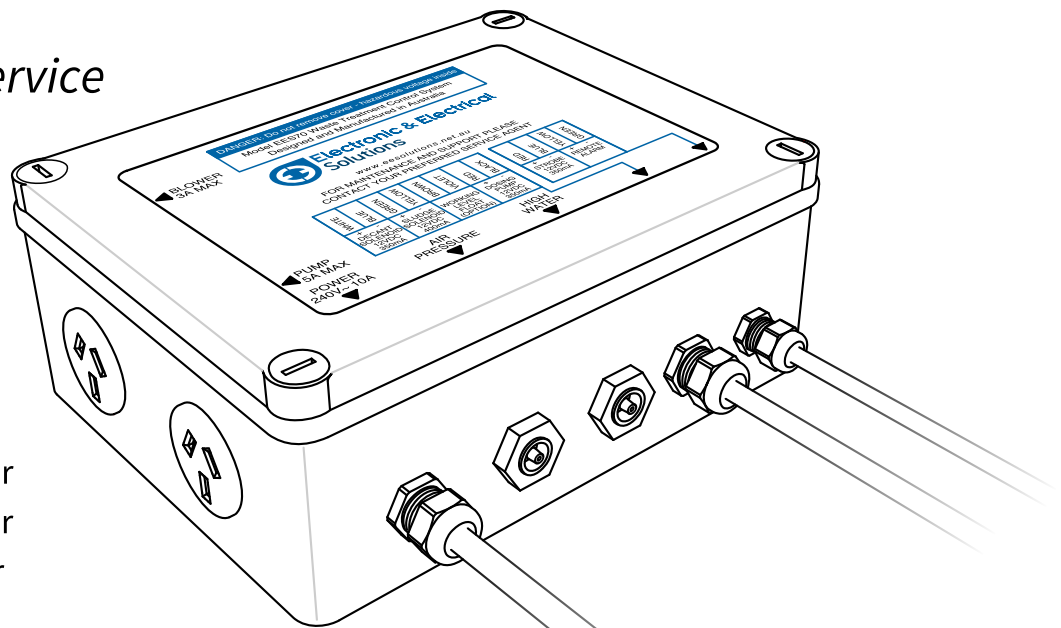

Domestic waste treatment plant manufacturers demand premium prices for replacement controllers, so the EES70 provides a more economical alternative to replacement and even often repair of the original controller.

*Designed with the Service Agent in mind.*

*12 Month Warranty*
